Country: United States of America

Certificate Details

Diploma in Project Management - Revised 2017   [Score: 93]

Course Details

The course starts by outlining the most important factors that need to be considered when preparing for a project, giving you a powerful checklist for your future project planning. You will then learn about the various phases of the project life cycle and of the system development life cycle. This will include overviews of the analysis, planning, design and evaluation phases. By the end of this section, you will have a strong understanding of the structure and flow of any project you will manage in future.

Next, the course gets into important details, taking a close look at project management methodology and basic tools. This will involve an explanation of the most important types of project management documentation such as program, system, technical, paper-based, electronic, and specialist user documentation. This will involve a full overview of crucial project management tools such as Gantt and PERT charts. Finally the course presents a project management case study where you can see the various phases of project management being carried out.
